Req ID 203299BR

Industry Job Title Technician Field Sr

Standard Job Code/Title N8153:Technician Field Sr

Required skills

- Basic knowledge of chemistry and chemical processes
- CBRNE experience (Chemical, Biological, Radiological, Nuclear Explosive)
- Prior laboratory experience
- A valid driver's license or the ability to meet the transportation requirements of this position.
- Excellent communication and interpersonal skills
- Ability to work independently and with a team
- Ability to work flexible hours

Desired skills

- Emergency Response Background
HAZWOPER Certification
- Past military experience in working with Chemical, Biological and Radiological equipment is a plus.

Specific Job Description

Candidate serves as maintenance technician for a multimedia environmental sampling operation charged with installation, maintenance and calibration on scientific monitoring equipment; chemical research and analysis as required; and performing other maintenance related work. Candidate as needed will also support an environmental sampling collection team charged with the collection, initial processing, and packaging and preparation for lab testing of environmental media at various locations within the National Capitol Region. Candidate may also be asked to perform initial response to incidents that may involve hazardous materials. Candidate will enter the danger area wearing full protective equipment in order to perform maintenance, sampling, identification, testing, mitigation, and containment of dangerous materials. Candidate will provide technical expertise to diagnose and repair electronic malfunctions, remove, and repair or replace unserviceable equipment. Candidate will troubleshoot and test faulty equipment, identify malfunctions and repair system malfunctions. Candidate will perform required daily, weekly, monthly, and yearly maintenance checks and services on equipment. Candidate will assist in performing confidence tests on selected equipment as needed to ensure proper operation, assist with system sample and identifications to determine health of equipment, maintain communications and download operational data.

Due to the nature of the job requirements, work hours are

subject to change to accommodate the needs of the customer. Candidate may be required to perform duties to support emergency operations. Duties and responsibilities include, but are not limited to the following:

- Apply knowledge of operation, capabilities and limitations of equipment and systems.
- Use ingenuity in the application of shop and trade practices to solve operating and repair problems.
- Be able to troubleshoot complex chemical analysis systems that lack documentation.
- Interact with engineers, manufacturer's representatives, and field personnel in troubleshooting and developing modifications, substitutions or, corrections to equipment to reduce breakdowns and/or simplify repairs, servicing or operation.
- Read and interpret drawings, specifications, and schematics of complex operational systems that create and use many interlocking signals.
- Analyze daily work reports, identify problems, interpret procedures, and problem solve to positive effect.
- Maintain work records; prepare clear and concise reports.
- Communicate clearly and concisely, both orally and in writing.
- Learn and observe all appropriate safety precautions as required, including, but not limited to, OSHA General Industry Safety Orders, Respiratory Protection Program, and Safety Directives.
- Work shift, on-call, weekends, and holidays as needed.
- Candidate must be able to follow written and oral instructions regarding sampling procedures and carry out tasks safely with minimal supervision and oversight. Candidate should have a strong customer focus. Candidate must successfully pass a medical screening exam to ensure that he/she can respond to incidents involving hazardous materials.

Standard Job Description

Installs, operates, maintains, repairs and modifies equipment. Performs a variety of maintenance and technical support on products such as equipment, integrated systems and subsystems, and software at customer and/or field locations. Analyzes and evaluates products and related performance. Troubleshoots and diagnoses malfunctions to eliminate problem in minimum time. Installs, upgrades and removes products ensuring coordinative engineering field change. Maintains effective customer communications and relations. May provide onsite training of customer support personnel.

Security Clearance

Secret

Typical Minimums

High School diploma, or equivalent experience/combined education, with additional technical training equivalent to a technical Associate degree and/or demonstrated ability to perform assigned preventive and demand maintenance tasks and 3 Years of experience.
